

Declaration of Conformity

EcoFlow PowerOcean series comply mandatory requirements of Austrian grid operator, allow external contactor control. EcoFlow certifies that the PowerOcean inverters comply with the mandatory active power control requirements set by Austrian grid operators.

The inverters are designed to be controlled via potential-free contacts, ensuring adherence to grid stability protocols: Closing the contactor commands the inverter to reduce its output power to zero, while opening the contactor restores normal output, ensuring compatibility with Austrian grid stability protocols.

The relevant product SKUs are listed below:
